

MOON TROPICA

About The Partner

Moon Tropica is a leading blockchain-based game that combines play-to-earn (P2E) mechanics with non-fungible tokens (NFTs). Players explore dynamic islands, complete quests, solve puzzles, and conquer dungeons, all within Moontropica's unique Web3 ecosystem.

The game emphasizes community engagement, crypto culture, and current events, offering an immersive experience where every action rewards players with valuable crypto assets.

Moon Tropica Challenge

Moon Tropica operated exclusively on a single blockchain, limiting its reach and user engagement. This isolation led to fragmented user experiences and constrained growth opportunities, common problems within Game-fi. To overcome these challenges, Moon Tropica needed to expand beyond its initial platform, enhance transaction efficiency, and attract a broader audience to increase their DAU's, unique wallets and overall mindshare within the wider game-fi space.

Smaller user base on ETH, due to high gas fees and less competitive gaming incentives than other chains.

Complications and the expenses of deploying a new token on another chain, without fragmenting userbases and ownership.

Limited ecosystem reach, struggling to expand beyond a siloed community and capture the attention of larger, growing networks.

Moon Tropica needed a simple, cost-efficient and programmable infrastructure for breaking out of their siloed community on ETH, and reaching userbases, volume and market mindshare of new chains. Existing available solutions were not adaptive or capable of providing an adequate solution for Moon Tropica.

Solutions

Entangle provides the essential infrastructure that enables seamless interoperability for blockchain-based gaming economies. By integrating Entangle's **Universal Token Standard (UTS)**, Moon Tropica has successfully expanded its in-game currency, \$CAH, beyond Ethereum to Binance Smart Chain (BSC), unlocking new liquidity and accessibility for its player base.

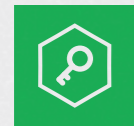

Product	Description	Function in Moon Tropica	Benefits
 Universal Token Standard	Cross-chain token framework	Enables \$CAH bridging between Ethereum and BSC	Expands liquidity access and market reach
	Token programmability	Allows \$CAH to function across multiple chains without losing utility	Improves transaction efficiency and usability
	Streamlined asset integration	Simplifies the process of bridging and using \$CAH across different ecosystems	Enhances user experience and reduces technical barriers

Entangle's UTS ensures that \$CAH remains fully functional and efficient as it moves across blockchain networks, enabling Moon Tropica to scale its ecosystem, increase user engagement, and benefit from increased volume and mindshare on BSC.

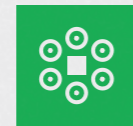

Results & Benefits

By integrating Entangle's industry leading UDF and UIP solutions, Kasu Finance successfully migrated **\$4 billion in private credit RWAs** onto blockchain networks, unlocking:

Maintaining Sovereignty

Moon Tropic's team maintained control of their smart contracts without any third party risks or exposing private keys.

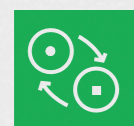

Omnichain Programmability

\$CAH token can now be programmed for omnichain tournaments across all virtual machines including Solana, TON, Tron and EVM chains.

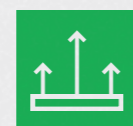

Broader Ecosystem Access

With BSC's robust infrastructure, Moon Tropic scales its ecosystem to support its growing player base, with \$CAH unlocking new opportunities for utility, grants, and users.

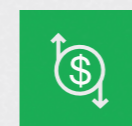

Enhanced Liquidity

Enabling trustless bridging to BSC taps into a broader market, attracting new users and increasing trading volume.

Faster Transactions

BSC enables speedier transactions, enhancing the overall gaming and trading experience that was negatively impacted on ETH.

Lower Transaction Costs

BSC offers significantly lower gas fees compared to many other blockchains

Using UTS to bridge Moon Tropic (\$CAH) tokens from Ethereum to BNB Chain was incredibly smooth and efficient. The process was lightning-fast, with minimal fees, making cross-chain transfers feel effortless. The intuitive interface ensured there were no complications—just a few clicks and the assets seamlessly moved from ETH to BNB Chain. Compared to traditional solutions I've used in the past, UTS is a game-changer for anyone navigating multi-chain ecosystems.

**Winston,
Founder of Moon Tropic**

Co-Marketing Initiatives with BNB Chain

As part of the partnership, Moon Tropic received co-marketing support from BNB Chain, amplifying its reach and visibility within the blockchain gaming community. This collaboration contributed to increased user engagement and transaction volume, expanding the ability to scale and grow to other chains.

About Entangle

Entangle is a leading blockchain interoperability infrastructure provider, built by a team of 120+ engineers, researchers, and industry experts dedicated to solving Web3's biggest challenges. For over three years, Entangle has been at the forefront of omnichain innovation, developing the fastest and most secure interoperability solutions while partnering with top blockchain ecosystems to enable seamless asset movement and real-time data access. Its Universal Interoperability Protocol (UIP), Universal Data Feeds (UDF) and Universal Token Standard (UTS), provide developers, protocols, and enterprises with the tools to scale cross-chain applications, bridge liquidity, and automate decentralized systems. As Web3 evolves, Entangle remains the backbone of a fully connected, data-driven, and interoperable decentralized economy.
